

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

## PREVALENCE OF DISEASE.

*No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.*

## New Jersey—Perth Amboy.

Acting Asst. Surg. Naulty, of the Public Health Service, reported October 21, 1913, that 5 new cases of typhoid fever had been notified in Perth Amboy since October 15, making a total of 78 cases, with 4 deaths, since the beginning of the outbreak, September 12, 1913.

The State Board of Health of New Jersey reported October 24, 1913, that the Division of Medical and Sanitary Inspection had investigated the epidemic and had ascertained the source of infection, and instituted measures for the control of the disease.

## California—Squirrels Collected and Examined.

During the week ended October 11, 1913, 161 ground squirrels from Alameda County were examined for plague infection. No plague-infected squirrels were found.

## Washington—Seattle—Plague in Rats.

Surg. Lloyd, of the United States Public Health Service, reported by telegraph October 28 that two plague-infected rats were found in Seattle, Wash., since the report given in the last issue of the Public Health Reports. This makes a total of nine plague-infected rats found in Seattle since September 30, 1913. Local authorities and officers of the United States Public Health Service are vigorously engaged in work to prevent the spread of the infection.
